

About Myself

My name is Daniel Samuel, and I hold a degree in electrical engineering from a reputable university in Nigeria. Currently, I am affiliated with a leading IT company in the United Kingdom working as a Full Stack Web Developer.

During my leisure time, I indulge in listening to music and playing computer games. I run a Twitter page sharing resources on "How to become a full stack developer in 48 hours!!!". I cordially invite you to visit my page by clicking on this link, and kindly consider liking, retweeting, and following me for more information.

As a full stack developer, below are some of my responsibilities:

- i. Developing front end website architecture.
- ii. Designing user interactions on web pages.
- iii. Developing back-end website applications.
- iv. Creating servers and databases for functionality.

During my training with Hagital Consulting, I develop the following skills:

- Strong organizational and project management skills.
- Proficiency with fundamental front-end languages such as HTML, CSS, and JavaScript.
- Excellent verbal communication skills.
- Good problem-solving skills.
- Attention to detail.
